Abstract:

The Project HOTEL MANAGEMENT SYSTEM is a web based application that allows the hotel manager to handle all hotel activities online. Hotel Management project provides room booking, staff management and other necessary hotel management features. The system allows the manager to post available rooms in the system. Customers can view and book room online. Admin has the power of either approving or disapproving the customer's booking request.

Introduction:

This project is about the hotel management system. There are different types of apps are circulating all around which gives us an idea about the new system of hotel management. People now prefer the easy way that always makes their life easy. HOTEL MANAGEMENT SYSTEM is a hotel reservation site script where site users will be able to search rooms availability with an online booking reservations system. Site users can also browse hotels, view room inventory, check availability, and book reservations in real-time. Site users enter check in date and check out date then search for availability and rates. After choosing the right room in the wanted hotel all booking and reservation process is done on the site and an SMS is sent to confirm the booking.

How Hotel Management System Works:

This website is developed using bootstrap & to add designs and make it more attractive we used jss to make it as best as we can. Different photos are included to give customers about the hotel. In this project, we develop a web page for a hotel management site that includes the type of rooms.

Different types of rooms are categorized under one section of the web page, check-in and checkout options are available we can online book the rooms and after any further query, we can modify or drop our room type or our booking.

And also it includes the address and contact number of members of the hotel if there is any issue is there for customers can easily contact and resolve their issue.

Contents of the web page:

- Home page
- Rooms
- Facilities
 - Junior suit
 - Senior suit
 - Standard room
- Contact
- About us

Different links are provided on the contact page to get into from Instagram, Facebook, and Twitter. On this web page, you can select different types of rooms on basis of your requirement as ac, and non-ac rooms are available.

Advantages:

- Sometimes it happens that the rooms get booked soon when one visits the place therefore user can make advance booking using this system.
- It saves user time in search of rooms.
- The system is useful as it calculates an exact cost for requested number of days.
- It saves organization resources and expenses.
- This system is effective and saves time and cost of users.
- Easy registration.
- Increase bookings.

Disadvantages:

- The booking process usually requires a customer identity which the system cannot detect.
- It requires a reliable internet connection.

**Output:**

“Customers may forget what you said  
but they will never forget how you made  
them feel”.

**Conclusion:**

Hotel management system now-a-days have the advantage of modernization. Computer have done the work more easy. Computer is playing a important role in management. Reports are made on daily basis for every customer check in or check out which can easily be seen by the management. Hotel management system has also primary purpose is to provide facilities to customers. A software for computers makes the things many times easy, these are made as user friendly and to keep an check and balance in hotel management and accounts as well.
